EDUCATION

Bachelor of Applied Science (B.A.Sc.) in Computer Engineering, Queen's University (ON) April 2027
Relevant Coursework: Engineering Design and Practice Sequence (I, II, III), Data Structures and Algorithms, Digital Systems, Circuits I, Calculus (I, II, III), Algorithms for Engineers, Microprocessors and Embedded Systems, Computer Architecture

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Java, SQL, Bash, Rust, Go
Development Tools & Platforms: Docker, Linux, Git, Snowflake, dbt, Airflow, Proxmox

PROFESSIONAL EXPERIENCE

Data & AI Engineer Co-op Sanofi September 2025 – Present

- Engineered semantic models and agent workflows using Snowflake Cortex, bridging complex SQL logic with Python to streamline internal portfolio data access
- Developed and managed automated dbt pipelines for internal planning products, focusing on business-logic automation and CI/CD reliability

Data & Analytics Intern Tilray Brands June 2025 – August 2025

- Leveraged SQL and Python to analyze large-scale sales and operations data, uncovering trends and delivering actionable insights that support strategic decision-making across departments
- Developed interactive dashboards and automated reporting tools in Power BI, enhancing data accessibility and improving reporting efficiency for cross-functional teams

Information Technology Analyst Intern Legal Aid Ontario May 2023 – September 2023

- Used Azure Cloud, VMWare, Citrix products to ensure efficient IT Operations
- Independently managed and completed projects that included a detailed help knowledge base, informative training videos for employees, and the inventory management system

Electronics I Course Developer Smith Engineering at Queen's University May 2024 – April 2025

- Collaborated with Dr. Brian Frank to create comprehensive lab educational content using LTSpice and LaTeX, supporting over 200 electrical and computer engineering students
- Documented test procedures for debugging electrical circuits

Digital Classrooms Intern Queen's University ITS May 2024 – August 2024

- Enhanced technological infrastructure through strategic hardware and software upgrades, implementing process improvements and technology solutions

TECHNICAL PROJECTS

AI/ML & Data Science Projects September 2023 – Present

- Proxmox High-Availability Cluster** (April 2026): Architected a 3-node Proxmox HA cluster for home automation, DNS, and VMs using power-efficient hardware and redundancy strategies
- Cyclicus** (September 2024 – Present): Developed a trading signal generator integrating technical analysis, BERT-based NLP sentiment evaluation, and machine learning. Employed a Random Forest model to predict stock actions. Built a full-stack web dashboard with FastAPI, Vue.js, and TailwindCSS for real-time visualization.
- Noteworthy** (September 2024 – December 2024): Developed a fully interactive notetaking app in C++ using Qt, WebAssembly, Docker, and Nginx. Features included collaborative notetaking, multiple pages, persistent memory, stickers, icons, bounding box selection, and more. Visit www.noteworthy.howdoesthiseven.work to demo.

LEADERSHIP & TEAM COLLABORATION

Vice President of Communications The Ontario Engineering Competition 2024 January 2023 – January 2024

- Led communications team managing stakeholder relationships and coordinating complex logistics for 300+ competitors, demonstrating strong project management and team collaboration skills

IT Operations Team Manager Engineering Society of Queen's University April 2023 – April 2024

- Directed the Engineering Society's IT Operations team, where I utilized server and IT infrastructure skills for system maintenance and efficiency, including ticket response and user management in Microsoft Azure
