EDUCATION

Bachelor of Applied Science (B.A.Sc.) in Computer Engineering *Queen's University (ON)* April 2027
Relevant Coursework: Data Structures and Algorithms, Algorithms for Engineers, Computer Architecture, Microprocessors and Embedded Systems, Digital Systems, Engineering Design and Practice Sequence (I-III)

TECHNICAL SKILLS

Languages: Python, SQL, C, C++, Bash, Java

Data & Platforms: Snowflake (Cortex, Snowpark, Streamlit, Tasks), dbt, Airflow, Docker, Linux, Git, ServiceNow APIs, Power BI, Proxmox

PROFESSIONAL EXPERIENCE

Data & AI Engineer Co-op *Sanofi* September 2025 – Present

- Led an internal LLM writeback agent end-to-end (architecture reviewed by senior eng): containerized Python services post structured updates into ServiceNow under deterministic and LLM relevance guardrails
- Built the majority of Snowflake Cortex semantic models on a shared portfolio data foundation and ran KT sessions for full-time engineers; production agent traffic averages ~1,500 queries/week (replacing analyst-built dashboard lookups for the same data)
- Built dbt pipelines and Streamlit-in-Snowflake tooling for a company license-optimization platform covering a ~100k-person workforce; led a workstream tracking application cost-center migrations for inactive-license cleanup
- Cut data-foundation refresh from 45 to 30 minutes; dbt/Airflow pipelines keep ServiceNow context at 30-minute freshness and Jira at 45 minutes, including a near-real-time ServiceNow API connector
- Shipped a GitHub Pages + Actions workflow so the team updates agent skills via issue → automated PR (no hand-edited config), plus CI that runs tagged dbt model diffs before merge

Data & Analytics Intern *Tilray Brands* June 2025 – August 2025

- Built demand-planning dashboards for the forecast team under cannabis shelf-life rules (product cannot be sold past a fixed window; planning horizons run months to years)
- Surfaced seasonal demand patterns from historical sales (e.g. vape volume peaks in winter, drops in warmer months) still used by the forecast team after the internship

Information Technology Analyst Intern *Legal Aid Ontario* May 2023 – September 2023

- Replaced a legacy on-prem inventory system (circa 1999) with a modern workflow for laptops and peripherals; also shipped a support knowledge base and training content for common fixes

Electronics I Course Developer *Smith Engineering at Queen's University* May 2024 – April 2025

- Authored new BJT and MOSFET labs and improved the transformer lab with Dr. Brian Frank, using LTSpice and L^AT_EX for 200+ ECE students

TECHNICAL PROJECTS

Proxmox HA Cluster | *Docker, Linux, reverse proxy* | [blog post](#) April 2026

- 3-node Proxmox HA lab; HomeKit Secure Video and Pi-hole containers fail over on node loss with ~2-minute recovery (measured ~118s)

Noteworthy | *C++, Qt, WebAssembly, Docker, Nginx* | [demo](#) Sep – Dec 2024

- Collaborative note-taking app in C++/Qt compiled to WebAssembly; demo hit ~30 concurrent users chatting live. Hardest pieces were WASM and durable persistence

PageScript | *Rust, compiler pipeline* | [blog post](#) 2026

- Designed a compact .page language and compile pipeline (parse → typed IR → safe HTML, no inline JS); Rust CLI targets smaller authored source than hand-written pages

LEADERSHIP

IT Operations Team Manager *Engineering Society of Queen's University* April 2023 – April 2024

- Owned Azure accounts, WordPress, and the EngSoc shop backend (real-money sales); hired and delegated a team after starting at ~10 tickets/week

Vice President of Communications *Ontario Engineering Competition 2024* January 2023 – January 2024

- Led comms for 300+ competitors; ran live logistics when buses failed to arrive for 150 students and chaired the formal process for a cheating investigation
